

HPE Networking Instant On Switch Series 1830

The features you need, the price you want

Easy switch management

Deploy HPE Networking Instant On Switch Series 1830 with management that fits your business best — Instant On cloud management or the local web GUI — all at no extra cost.

Small businesses lack the resources larger companies have to manage IT infrastructure. They need cost-effective solutions to manage their networks, as they don't have the people or budgets to deploy complex networking solutions.

The HPE Networking Instant On Switch Series 1830 is an affordable, easy-to-deploy, and easy-to-manage switching solution for small businesses looking for a cost-effective wired infrastructure to keep up with evolving network demands. These entry-level smart-managed switches can be managed via the Instant On mobile app or web portal, or, for more robust features, locally managed in a web GUI. Offering Layer 2 features, gigabit connectivity, and Power-over-Ethernet, the 1830 switches have all the features you need without the complexity of enterprise-grade hardware.

The 1830 access switches are offered in 8-, 24-, and 48-port configurations with and without PoE. Designed for smaller businesses, only half of the ports on the PoE models are powered. This means you get features like Global Storm Control, SSL, and SNMPv1 typically reserved for larger companies at a small business price. The 1830 switches all have SFP uplinks that allow for communication with other switches on the network.

Benefits

- Set up in minutes**
 Get step-by-step guidance via the Instant On mobile app
- Manage anytime, anywhere**
 Monitor and manage performance with the Instant On mobile app or cloud-based web portal
- Power-over-Ethernet when you need it**
 Power the latest IP-Phones, security cameras and access points
- Security for your data and information**
 Keep your business safe with the latest enterprise-class security protocols
- Ready to grow with you**
 The Instant On mobile app and web portal can manage up to 50 Instant On devices on a single network
