

Get more stays with powerful networking

The first things weary travelers ask for at check-in are, “When will my room be ready?” and “How do I get on the Wi-Fi?”

As the pressure to provide premium wireless connectivity increases with every new guest, the ability to handle the growing demand on the network becomes critical to guest satisfaction.

In conjunction with the rising number of guests, hotels can expect additional untrusted devices connected to the network which can cause slowdowns during peak times. These escalating network demands can present significant challenges. Growing businesses like yours can't afford underperforming networks or costly infrastructure overhauls. Investing in scalable, high-performance networking solutions is crucial to support your growth without disrupting operations, ensuring exceptional guest experiences and service with a smile.

Why superior networking matters

Choosing the right integrated networking solution is essential for delivering excellent service in your hotel. HPE Networking Instant On offers the gold standard for connected comfort and unforgettable stays, providing a robust and reliable network that gives you:

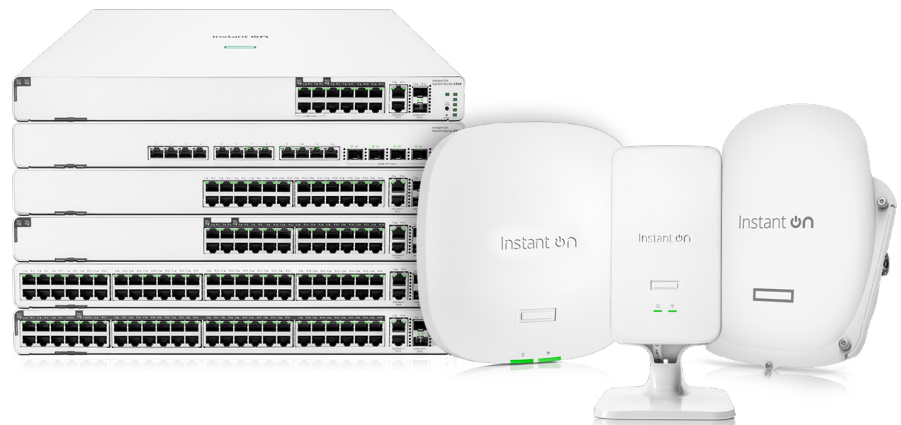

- 1. Bottleneck-free internet access:** offer your guests fast, reliable internet for streaming, social media sharing, and other online activities.
- 2. Widespread Wi-Fi coverage:** comprehensive Wi-Fi coverage throughout the property, including guest rooms, lobbies, conference rooms, restaurants, and outdoor areas.
- 3. Scalability:** stack and scale your network to accommodate fluctuating guest counts and emerging technologies without disrupting services.
- 4. Security:** robust security measures protect guest information, hotel data, and IoT devices from cyber threats.
- 5. Bandwidth management:** efficient bandwidth management ensures business operations take priority and prevent network congestion during peak guest hours.
- 6. IoT device support:** integration and support for IoT devices used for smart room controls, security systems, energy management, and other operational appliances.

Better Wi-Fi, happier guests

Do you want to deliver five-star Wi-Fi for stays your guests will never forget? With HPE Networking Instant On, you can easily upgrade to a high-performing network that scales with you. And by providing a superior Wi-Fi experience, you'll improve guest satisfaction and increase employee productivity. Pairing the [HPE Networking Instant On Switch Series 1960](#) with the HPE Networking Instant On Access Point [AP32](#), [AP22D](#), and/or [AP27](#) will elevate your hotel to new heights by providing a comprehensive solution that features:

- Class 6 PoE that supports high-bandwidth APs and security cameras (Switch Series 1960)
- True Stacking and 10GbE uplink ports that make expanding coverage simple, smart, and seamless (Switch Series 1960)
- Support for the latest Wi-Fi 6E devices from laptops to IoT sensors with a dedicated 6GHz band (AP32)
- Superior in-room wired and wireless performance with on-board PoE and Ethernet ports (AP22D)
- Year-round outdoor connectivity with a rugged, all-weather IP67 rating (AP27)
- Ongoing, free enhancements to the management portal providing investment protection (Instant On Cloud Portal)
- Easy-to-set-up guest and employee networks with application-aware filtering to protect both guest and staff data (Instant On Cloud Portal)
- A status panel that displays what is causing network degradation and how to fix it, along with the ability to export event logs
