

Why your SMB network needs a gateway

Protect your network from external threats

Centralize control of traffic

Ensure efficient data flow

1. What is a gateway, and why do small and medium businesses need one?

A gateway acts as a bridge between your internal network and the outside world, monitoring the traffic and providing a secure connection to the internet. It's a critical component of your network, providing:

- **Security:** protects your network from external threats
- **Network management:** centralizes control of traffic between internal and external systems
- **Optimized performance:** ensures efficient data flow and optimum throughput

Unify network of devices

Simplify installation

Control the network from a single dashboard

Get near lossless browsing and protection

No subscriptions or fees

Lower TCO

Free firmware updates and security patches

2. Why choose a Secure Gateway from HPE Networking Instant On?

If you're already using Instant On switches and access points, adding a secure gateway amplifies your network with:

- **Seamless integration:** enjoy a fully unified network solution with access points, switches, and gateways that are designed to work together effortlessly
- **Easy setup:** simplify installation with step-by-step cloud-based deployment and no complex configurations
- **Centralized management:** control your entire network from a single dashboard, saving time and streamlining network management
- **Enhanced security scanning:** Instant On Secure Gateways utilize hardware-accelerated deep packet inspection (DPI) and intrusion detection and prevention (IPS/IDS), providing near-lossless browsing and protection

If you're building a network from scratch, investing in the complete Instant On portfolio will maximize these benefits. And for those renewing or upgrading, Instant On offers a comprehensive, cost-effective solution to meet all your networking needs.

3. No extra fees. No hidden costs.

With HPE Networking Instant On, you'll benefit from:

- **No licensing fees:** you get all the features up front without costly subscriptions or hidden charges
- **Lower total cost of ownership:** a single-vendor solution means no extra software costs and no need for separate support contracts
- **Future-proofed solution:** enjoy firmware updates and security patches free of charge, keeping your network secure and up to date at no additional cost

HPE Networking Instant On is a comprehensive, cost-effective solution that includes gateways, switches, access points, and unified cloud-based management. With Instant On, you get advanced, smart, and secure networking that's easy to use — all at an SMB-friendly price.

HPE Networking Instant On —
Empowering SMBs with reliable, secure, and easy-to-use solutions
